

Wholistic™ Field Sprays, Broadcaster Kits, Samplers & Publications

1. Winter-Spring Premix™
2. Winter-Spring Ground Field Spray™
3. Winter-Spring Leaf Field Spray™
4. Winter-Spring Booster Formula™
5. Winter-Spring Horn Clay Formula™ **NEW***
6. Summer-Fall Premix™
7. Summer-Fall Ground Field Spray™
8. Summer-Fall Leaf Field Spray™
9. Summer-Fall Booster Formula™
10. Summer-Fall Horn Clay Formula™ **NEW***
11. Basalt Formula™
12. Basilica Formula™ **NEW**
13. Big Seed & Oil Formula™ **NEW**
14. BrixUp™ Insect Protection for Whole Plants
15. BrixUpVLS™ Insect Protection for Whole Plants
16. Chamomile Formula™ **NEW**
17. Compost Invigorator™ **NEW High Energy Formula**
18. Dandelion Formula™
19. Dormancy Formula™
20. Enlargement Formula™
21. Equisetum Formula™ **NEW**
22. Field Drying Formula 501™ **NEW 2X Faster**
23. Flavor Activator #1 & #2
24. Flavor Activator #3 & #4 **NEW**
25. Flavor Activator #5 & #6 **NEW**
26. Flowering Formula™
27. Fruit Ripening Formula™
28. Fungus Eruptus™ **NEW Super Strength**
29. Fungus Interruptus™ **NEW Super Strength**
30. JuiceUp™ Increase Juice **NEW**
31. New Life Formula™ **NEW**
32. Nutrient Release Formula™
33. Oak Bark Formula™ **NEW**
34. OilUp™ Increase Oil Production **NEW**
35. Pruning Formula™
36. Sea Spray Sea Mineral Formula™ **NEW**
37. Seed Starting & Transplant Formula™
38. Stinging Nettle Formula™ **NEW**

39. Root Ripening Formula™
40. Root Basilica Formula™ **NEW**
41. Yarrow Formula™ **NEW**
42. Valerian 507 Red/Black Label Color Intensifying Formula™
43. Valerian Frost Protection Formula™
44. White Fly Formula™

ULTRA PRESEQUENCED FIELD SPRAYS

1. Winter-Spring Ultra Basic 500 ml Field Spray™ **NEW**
2. Summer-Fall Ultra Basic 500 ml Field Spray™ **NEW**
3. Winter-Spring 1000 ml Ultra Field Spray™
4. Summer-Fall 1000 ml Ultra Field Spray™
5. Winter-Spring Ultra Root 1100 ml Field Spray™ **NEW**
6. Summer-Fall Ultra Root 1100 ml Field Spray™ **NEW**
7. Winter-Spring Ultra 1200 ml Field Spray™ **NEW**
8. Summer-Fall Ultra 1200 ml Field Spray™ **NEW**
9. Custom Vineyard, Orchard & Other Field Sprays Are Available

FORCE FIELD GENERATOR & BROADCASTER SUPPLIES

1. Basic WFFG & Broadcaster Kit
2. Starter WFFG & Broadcaster Kit
3. Advanced WFFG & Broadcaster Kit
4. Wholistic™ Force Field Generators for 25,000 & 50,000 acres

WHOLISTIC™ FIELD SPRAY SAMPLERS

1. Set of 22 Basic Field Sprays

WEED PEPPER SPRAYS

1. Johnson Grass
2. Dallisgrass
3. Nutsedge/Nutgrass
4. Other Pepper Sprays are available. Please Inquire.

GW Agriculture™ Wholistic™ Nanotechnology Agricultural Field Sprays

<p>Winter-Spring Premix™</p> <p>Summer-Fall Premix™</p>	<p>Premix™ prepares the soil and plants for the general field sprays. Used alone, it hammers a field or garden back into the correct energy balance instantly. It is far too powerful to use as a single spray for long periods of time. It must be modified with the application of the "A" & "B" or "C" & "D" Field Sprays to be most effective. The Winter-Spring Premix™ is made with Spring to Spring Horn Clay to be in tune with the lengthening of daylight hours and the Forces of Nature influencing life between December 22 and June 21. The Summer-Fall Premix™ is made with Fall to Fall Horn Clay to be in tune with the shortening of daylight hours and the Forces of Nature influencing life between June 22 and December 21. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Winter-Spring Ground Field Spray "A"™</p> <p>Summer-Fall Ground Field Spray "C"™</p>	<p>The Ground Field Sprays work primarily in the root, stem and leaf parts of the plant and secondarily in the flower, fruit and seed parts of plants, encouraging lush growth, healthy root systems and enhancing the relationship between the plant and the Earth and water elements. The main ingredient is Horn Humus (né Horn Manure) prepared in a base of aged cow manure. If applied separately, it will bring moisture to and loosen the soil but if left untempered, will cause lush growth at the expense of upper growth balance and fruit, flower and seed production. The Winter-Spring Ground Field Spray "A"™ is made with Spring to Spring Horn Clay to be in tune with the lengthening of daylight hours and the Forces of Nature influencing life between December 22 and June 21. The Summer-Fall Ground Field Spray "C"™ is made with Fall to Fall Horn Clay to be in tune with the shortening of daylight hours and the Forces of Nature influencing life between June 22 and December 21. To be most effective, a Ground Field Spray must be balanced with the "B" and "D" Leaf Field Sprays whose primary ingredient is Horn Quartz (né Horn Silica). Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Winter-Spring Leaf Field Spray "B"™</p> <p>Summer-Fall Leaf Field Spray "D"™</p>	<p>The Leaf Field Sprays work primarily in the flower, fruit and seed plant parts and secondarily in the root, stem and leaf parts of plants, encouraging healthy flower, fruit and seed formation, enhancing the relationship between the plant and the atmosphere, sunlight, moonlight and the Cosmos. The main ingredient is Horn Quartz (né Horn Silica) made in a base of seaweed. If applied separately, it will bring moisture to and loosen the soil but if left untempered, will cause excessive top growth, verticality and quicker seeding at the expense of lower growth balance and root, stem and leaf production. The Winter-Spring Ground Field Spray "A"™ is made with Spring to Spring Horn Clay to be in tune with the lengthening of daylight hours and the Forces of Nature influencing life between December 22 and June 21. The Summer-Fall Ground Field Spray "C"™ is made with Fall to Fall Horn Clay to be in tune with the shortening of daylight hours and the Forces of Nature influencing life between June 22 and December 21. To be most effective, a Leaf Field Spray must be balanced with the "A" and "C" Leaf Field Sprays whose primary ingredient is Horn Humus (né Horn Manure). Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Winter-Spring Booster Formula™</p> <p>Summer-Fall Booster Formula™</p>	<p>While Premix™ rebalances energies in soil, Premix™ + Oak Bark Preparation provides an additional measure of healing for plants and other organisms. Steiner said, "Now, not all, but a large number of plant diseases can be alleviated just by a means of a rational method of manuring. What is needed is that the manuring add calcium to the soil. For the calcium to have a healing effect, however, it has to be calcium from something living . . . one plant contains plenty of calcium [and that plant] is the oak." By combining Premix™ and Oak Bark Preparation, we can provide the strongest healing element ever created for the farm and garden. This combination we call the Booster Formula™. Use the Booster Formula™ with an animal-plant manure compost program for healing and preventing all plant bacterial and viral plant diseases. Fungi, not being diseases, are best treated with Fungus Interruptus™ and Equisetum arvense Formula™. Winter-Spring Booster Formula™ is applied between December 22 and June 21. The Summer-Fall Booster Formula™ is applied between June 22 and December 21. The most effective way to apply these four primary formulas is as follows: Premix™, Ground Field Spray, Leaf Field Spray and Booster Formula™ last in the sequence. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>

GW Agriculture™ Wholistic™ Nanotechnology Agricultural Field Sprays

<p>Basalt Formula™</p>	<p>The Basalt Formula™ makes wood - trunks, limbs and branches - <u>above</u> ground harder, tougher, stronger and healthier. Apply on soil around trees and shrubs to improve health and resist disease. Adds “zing” to fruit. Very good for wine grapes. Used to intensify flavors just before harvest. The Basalt Formula™ infuses soil and trees with the Life Force Current. Apply no more than once a week for first 2 - 3 weeks, no more than once a month thereafter. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Basilica Formula™ <i>NEW</i></p>	<p>Basilica™ is stronger than the Basalt Formula™. It contains both basalt and silica. Toughens and strengthens bark, trunks, branches, limbs, canes, stems, wheat flags and roots, makes wood harder and healthier. Helps recently pruned bushes, trees & vines recover faster. Excellent for orchards, vineyards, wheat, rice, landscaping and Pierce’s Disease protection. Will not damage grass or herbaceous perennials. May be applied to soil and grass around trees, vines and shrubs to improve health and resist disease. As with the Basalt Formula™, spray on fruit for even more intense flavors before harvest. This is a very strong formula. If the goal is to intensify flavors, test it first on a small sample and compare Basilica™ to the Basalt Formula™ before spraying the entire vineyard or orchard. Approved for Certified Organic, Biodynamic and Certified Wholistic™ Farms.</p>
<p>Big Seed & Oil Formula™ <i>NEW</i></p>	<p>Big Seed & Oil™ is formulated to increase seed size with heavier weight and increase oil or juice in fruit and seeds. Great for oilseed crops. Targets seed heads. Apply to grains after the flowers are fertilized. In fruit crops, apply half way through the ripening process. DO NOT USE ON WINEGRAPES. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>BrixUp™ Insect Protection for Whole Plants BrixUp™ VLS (Very Low Sugar) <i>NEW</i></p>	<p>BrixUp™ is a unique way to protect plants from chewing and sucking pests. Insects are unable to expel gas from their stomachs. Intake of elevated Brix/sugar levels in sap by these insects can cause fermentation gasses to rise in their gut, which explodes, killing them. Insects sense this and avoid plants with high Brix/sugar levels. BrixUp™ targets the whole plant, increasing the sugar levels 1-3° Brix in 10 days. or with regular usage, helps maintain sufficiently high sugar levels to discourage pests. Apply when sugar levels are lower than 12°-14° Brix in leaves. BrixUp™ VLS is for very low sugars. BU not a substitute for a good Wholistic™ crop and soil management program but is an amendment to temporarily lessen or solve a pest problem. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Chamomile Formula™ <i>NEW</i> (Used For Periodicity Cycle Applications)</p>	<p>Chamomile Formula™ helps stimulate the formation of organic matter in your soil and plants, at season’s end improves and intensified flavors in wine and winegrapes, as well as in vegetables, strawberries, fruits and all other plants. Good for root growth, sweetening roots and root crops (use with Dormancy Formula™ for pure sugar in roots) and may be used as a dormancy spray. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Compost Invigorator™ <i>NEW High Energy Formula</i></p>	<p>Compost Invigorator™ contains the six compost herbs recommended by Rudolf Steiner for superior compost plus Equisetum arvense to assist in energy regulation and fungus control and basalt for increased compost energy makes this the best Compost Invigorator™ we have created so far. 95% less difficult to apply than raw preparations and far less expensive. Apply to all compost materials when collected and piled. One or two additional applications during breakdown is recommended. Compost Invigorator™ is also used with the Dandelion Formula™ to control codling moths after apple trees have bloomed. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Dandelion Formula™</p>	<p>Dandelion Formula™ is used to delay bloom in vines and fruit trees for about 5 days, and to encourage the proper formation of flower reproductive organs and seeds. For codling moths, apply in the morning as flower buds are just forming, or, apply Compost Invigorator™ to flowers after bud break. Always use with the Ultra Field Sprays™ for best effect. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Dormancy Formula™</p>	<p>Dormancy Formula™ encourages the onset of dormancy, essential for fruit production, and to protect biennials and perennials from winter kill. This formula drives sugars down into root systems where they are stored for use in the Spring and helps shut down cell reproduction throughout the plant. It works downward in the upper and lower parts of plants. See Root Ripening Formula™. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>

GW Agriculture™ Wholistic™ Nanotechnology Agricultural Field Sprays

Enlargement Formula™	Enlargement Formula™ makes flowers, fruit, seeds and other plant parts grow bigger. Apply before bloom for bigger flowers, after bloom as fruit develops for bigger fruit and seeds. Good for everything. Apply to the plant and the soil. Good for table grapes, apples, oranges and virtually all other fruit where high content of juice in each fruit is desirable. Not for use on winegrapes. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Equisetum Formula™ <i>NEW</i>	Equisetum Formula™ is used for stopping the growth of unwanted fungus where other sprays do not work. Pure Equisetum is very powerful. It is highly focused. Use sparingly as an occasional remedy only, employing Fungus Interruptus™ instead. Very good for added energy streaming in compost and as an occasional general tonic for vineyards, orchards, Cucurbita and other vegetables susceptible to mildew and fungi. It may be applied out of sequence at any time of year, day or night. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Field Drying Formula™ <i>NEW Improved 2X Faster</i>	Field Drying Formula™ is used where water soaked fields are a problem, where crops must be dried out faster such as cut hay or alfalfa after a rain or anywhere it is desirable to have drier fields such as around honeybee hives. This field spray may be applied at any time but is not effective while it is raining. Wait for the rain to stop. For flooded fields, follow with the Yarrow Formula™. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Flavor Activator 1 & 2™ Mature & Mellow	Flavor Activator 1 & 2™ Mature & Mellow is a flavor and aroma modification spray based on our Summer - Fall Ground and Leaf Field Sprays, allowing you to instantly taste what fruits, nuts, vegetables and wine would taste like if the entire field had been grown using these field sprays. Always apply in the correct order, 1 then 2, or the opposite effect will take place, making the food or wine taste worse, not better. If order is reversed, simply reapply in the right order to correct. If artificial flavors are sprayed, flavors are degraded and the real chemical flavors come forward. Instantly softens tannins, balances and brightens fruit, fills in the middle palette, wine tastes sweeter and gives a longer lasting, more satiating finish. Great for cheese and all food. Remarkably, may be applied outside the glass or bottle or inside with the same results. Reintroduces spiritual energy to all foods. Use on everything you eat. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Flavor Activator 4 & 4™ Jammy & Juicy <i>NEW</i>	Flavor Activator 3 & 4™ Jammy & Juicy instantly advances the fruit and diminishes tannins. Great for white wines and fruit forward reds. Wonderful for cheese and all food. The same instructions apply as with Flavor Activator 1 & 2 . This spray is made from a slightly different potency than 1 & 2 or 5 & 6. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Flavor Activator 5 & 6™ Intense Flavors <i>NEW</i>	Flavor Activator 5 & 6™ Intense Flavors intensifies the entire palette = more fruit, more structure, more aromas and longer finish. Excellent for wines meant to age. Great for cheese and all food. The same instructions apply as with Flavor Activator 1 & 2 . This spray is made from a slightly different potency than 1 & 2 and 3 & 4. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Flowering Formula™	Flowering Formula™ promotes the growth of more flowers in all plants. More flowers mean higher yields. Apply after the general field sprays but before bloom time, the timing depending on the crop. Generally one to four weeks before normal flowering is sufficient. If blooming has stopped for any reason, the Flowering Formula™ can be used to restart the blooming process. May be applied any time. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.
Fruit Ripening Formula™	Fruit Ripening Formula™ increases Brix (sugar) in fruits 3° to 6° Brix in 10 days in the field. This product has saved hundreds of thousands of dollars of winegrapes. Apply when ripening is stuck at a rate of 4 ounces per acre. Actually improves flavors while increasing total sugars. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.

GW Agriculture™ Wholistic™ Nanotechnology Agricultural Field Sprays

<p>Fungus Eruptus™ <i>NEW</i> Super Strength</p>	<p>Fungus Eruptus™ is employed to encourage growth of edible mushrooms, truffles and mycorrhizae, the soil fungi essential for phosphorous intake in plants. Always apply an Ultra Field Spray™ first, then Fungus Eruptus™ to the soil, spawn or growing medium such as horse manure compost or logs. Apply no more frequently than once a month outside, once a week inside for mushrooms or whenever new media are inoculated. May be applied to compost piles for special high mycorrhizae blends. Fungus Eruptus™ is specifically formulated to deactivate unwanted fungi below ground and to work with Root Basilica™ in the Ultra Root Field Spray™ to control and eliminate root pathogens. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Fungus Interruptus™ NEW Super Strength</p>	<p>Fungus Interruptus™ is the premier and most popular Wholistic™ Field Spray we make. It prevents fungi from activating and stops it if it is active. It works on all unwanted fungus, above or below ground. It is recognized around the world as the BEST protection against all fungal infestations in ANY crop, anywhere, compared to all others, chemical or nonchemical treatments. It contains no chemicals or poisons, only water, quartz and Equisetum arvense tea. It is not a fungicide. It is unique in that it only stops the growth of unwanted fungi. Will not harm beneficial fungi or any soil biota of any kind as do all other chemical fungicides and organically approved fungicides such as sulfur. Completely safe for humans, animals, plants and aquatic life. May be used alone or with other Wholistic™ Field Sprays. Compatible with chemical agriculture systems as well, although it works better without the stress on plants caused by chemical agriculture. Fungi are not diseases. Fungi only recycle dead matter. Fungus interruptus™ brings life to plants, eliminating the need for what are normally called pathogenic fungi, molds, mildew, rust, etc., deactivating them in the process, causing them to die or go dormant. For a more complete explanation of the role of fungi, see the Wholistic™ Agriculture Field Broadcaster Handbook which may be downloaded at www.theccdsolution.com for free. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>JuiceUp™ Juice Increaser NEW</p>	<p>JuiceUp™ is specifically formulated to increase the amount of juice and liquid in fruits, seeds, nuts, grains, flowers, leaves, stems and roots. Apply to grains after the flowers are fertilized. In fruits, apply half way through the ripening process. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>New Life Formula™ <i>NEW</i></p>	<p>New Life Formula™ is only to be used to bring back life force energy directly to a field that is in terrible condition. It is to be used sparingly and only as a first step on fields destroyed by chemicals, poisons of any kind, including organically and biodynamically approved poisons. It will shock a field back to life very quickly, but you must go through the steps of rebuilding the soil as well. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Nutrient Release Formula™</p>	<p>Nutrient Release Formula™ has shown through independent laboratory tests to release and make available 2.5% to 5% more nutrients to plants either after the application of NRF alone or within a specially formulated Ultra Field Spray™. NRF does not increase the total amount of nutrients in the soil. It makes more nutrients available to the plant from the existing nutrients in the soil and air similar to amending soil with a 2-2-2 or a 5-5-5 organic fertilizer. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Oak Bark Formula™ <i>NEW</i></p>	<p>Oak Bark Formula™ provides the vegetative form of calcium essential for healing plants so they grow the way they are supposed to grow and prevent disease. Oak Bark Formula™ will have a profound effect not only in balancing the various bodies of the plant, but provides the healing forces needed for the entire field. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>

GW Agriculture™ Wholistic™ Nanotechnology Agricultural Field Sprays

<p>OilUp™ Increase Oil Production <i>NEW</i></p>	<p>OilUp™ is used on crops where high oil content is important such as rape seed for canola oil, soybeans, sunflowers cotton seed oil, etc.. Apply OilUp™ to increase the amount of oil in fruit, seeds, flowers, leaves, stems and roots. Apply to grains after the flowers are fertilized. In fruit crops, apply halfway through the ripening process. Will not effect flavors, only content. Do not use on winegrapes. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Pruning Formula™</p>	<p>Pruning Formula™ is employed to dry out cuts, wounds and bruises resulting from pruning maintenance and normal or accidental tree, branch or cane bruises, cuts and wounds. It prevents the spread of pathogenic fungi and heals cuts and wounds quickly. Normally, pruning wounds may weep for weeks, especially in wine grape vines. Applying the Pruning Formula™ will normally dry up cuts in less than 48 hours. Excellent for treatment of hedge pruning and other garden maintenance. Use on root balls and bare roots when transplanting. Apply to the soil after root pruning or experiencing root damage do to construction, maintenance, etc. Apply evenly throughout the field or garden. This product is extremely potent. It is not necessary to spray each plant or wound individually but can be done so if desired. When pruning orchards and vineyards, apply anytime from 3 to 5 days before pruning to 3 to 5 days after for maximum effectiveness. It is unaffected by rain. Flat land vineyards and orchards can be effectively treated with the Pruning Formula™ in as little as 10 minutes per acre by ATV spraying. Apply to ground after root pruning. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Root Basilica™ Root Strengthening Formula <i>NEW</i></p>	<p>Root Basilica™ Root Strengthening Formula toughens, strengthens and hardens woody roots, protects them from fungus and pests. Helps recently pruned roots recover faster. Excellent for forest management, orchards, landscaping and vineyards and Phylloxera protection. Will not damage grass or herbaceous perennials. May be applied to soil and grass around trees, vines and shrubs to improve health and resist disease. Spray on root crops just before harvest to intensify flavors. Not recommended for long term use for fleshy root crops unless heavily diseased. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Root Ripening Formula™</p>	<p>Root Ripening Formula™ can increase the value of root crops by increasing sugar content very quickly, especially sugar beets, improve the flavors and sweetness of all root crops and can be used as the first step of a 2-step dormancy inducing and improving process. Apply a light spray on the plant after applying the appropriate Ultra Field Sprays. Raises Brix 1° to 3° in 10 days. Make one application for each °Brix increase desired to a maximum of 3° Brix. Use for driving sugars down into roots in annuals, biennials and perennials, vines and fruit trees during the end of the growing season and after harvest. This sugar is stored in roots and provides more food for the plant the next Spring. May also be used in the kitchen to sweeten carrots, beets, salsify, potatoes and other roots and tubers before or after cooking. The Dormancy Formula™ acts in the same way as the Crystallization Forces in renewing and restructuring the cellular structure of a plant. To encourage onset of dormancy, apply the Fruit Ripening Formula™ and the Dormancy Formula™ as a light spray in the Fall. In vines, winegrapes, fruit trees and other plants requiring a dormancy period for proper fruit bearing and production, for a more deeper dormancy period, apply the Root Ripening Formula™ about 3 weeks after fruit harvest (before the first frost date), then apply the Dormancy Formula™ right after the first frost date. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>

<p>Sea Spray Sea Mineral Formula™ <i>NEW</i></p>	<p>Sea Spray Sea Mineral Formula™ is another miraculous new product that can quickly create a greener and healthier appearance of leaves in gardens, orchards, vineyards, fields and forests, usually in less than one hour. Sea Spray Sea Mineral Formula™ is the most important field spray we have for reconditioning soil and making plants more healthy and more resistant to diseases and insect damage. Homeopathically made with Australian Sea Minerals, the Sea Spray Formula™ balances the elements in a field by overlaying the archetype of sea water, from which all life evolved, and activating the natural elements and minerals in the soil and plants. It can help drive away unwanted insects from plants, phylloxera and nematodes from roots and return worms to the soil. Apply before Nutrient Release Formula™, not after. This is the one great remedy everyone should have. When applying, look for an immediate strengthening of the leaves of the plant, noticeable within 15 - 30 minutes of application. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Seed Starting & Transplant Formula™</p>	<p>Seed Starting & Transplant Formula™ is a double duty field spray good for starting seeds and for reducing or eliminating transplant shock to seedlings and grown plants. To start seeds, lessen transplant shock and assist plants and seedlings in making proper root contact with the soil, apply Seed Starting & Transplant Formula™ lightly to the soil around transplants and generally wherever seeds are planted such as fields, gardens, flats and pots. For large field applications, apply to seed bags and hoppers, or seedling flats first, then apply Fungus Interruptus™ to the same seed containers, hoppers and flats before drilling and transplanting. This is an extremely potent field spray. In order to avoid an overgrowth of root development and an unbalanced plant, apply the appropriate Ultra Field Spray 1 to 3 weeks after transplanting, or just after the first true leaves appear. Seed Starting & Transplant Formula™ causes roots to grow faster and make proper contact with the soil and soil fungi, bacteria and beneficial viruses. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Stinging Nettle Formula™ <i>NEW</i></p>	<p>Stinging Nettle Formula™ Stinging nettle is a very serious plant. The acid in the leaves is useful in bringing the kinds of etheric energy and archetypal patterns to the plants that are necessary for the formation of the structure of the plant. Stinging Nettle works upward in a plant. An application of Stinging Nettle Formula™ will cause the plant to grow in the pattern it is supposed to grow. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Transplant Formula™</p>	<p>See Seed Starting & Transplant Formula™ above.</p>
<p>Valerian 507 Red/Black Label Color Intensifying Formula™</p>	<p>Valerian Red/Black Label Color Intensifying Formula™, when applied, instantly darkens colors on plant leaves and flowers one or two shades, intensifies flavors in fruits, nuts, vegetables, juice and wine and when applied in the field during the end of the growing season, produces healthier, harder shelled seeds in crops such as cereal grains. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Valerian Frost Protection Formula™</p>	<p>Valerian Frost Protection Formula™ Apply Valerian 507 Frost Protection™ as a mist during daylight hours whenever frost threatens. May also be used to enhance flower colors and after bloom to produce higher quality seeds. This remedy has shown it can protect leaves and fruit down to 28°, and flowers such as pansies from frost damage down to 24° F. CAUTION: May cause early termination of flowering. Use Flowering Formula™ <u>immediately</u> after spraying to extend bloom time. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>

<p>White Fly Formula™</p>	<p>White Fly Formula™ This solution works especially well in greenhouse operations if you follow the instructions. Apply the appropriate Wholistic™ Field Spray first, then apply White Fly Solution™ <i>concentrate</i> as a mist to the leaves of your plants. Do not mix with water. Apply directly. Fertilize plants heavily with a complete non-chemical liquid fertilizer such as Maxsea® or well digested compost tea and be sure to provide adequate air changes and ventilation. The best compost teas are made using the Wholistic™ formula: 6 parts cow manure, 2 parts horse manure, 1 part bird manure, 1 part garden or crop residues and an equal volume of straw or spoiled hay. The formula and instructions are published in the Wholistic™ Agriculture Field Broadcaster Handbook which may be downloaded for free. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Yarrow Formula™ <i>NEW</i></p>	<p>Yarrow Formula™ reestablishes the archetypal patterns of all plants & minerals, resets the balance of elements in the soil, helps restore destroyed or flooded fields where remedial action is needed immediately, stimulates seedlings to grow into their proper form when started in soilless media such as peat moss or other mineral-less media and helps a soil change toward a neutral pH. Yarrow is best used in combination with other Wholistic™ Field Sprays and only sparingly. Approved for Certified Organic, Biodynamic® and Certified Wholistic™ Farms.</p>
<p>Ultra Basic Winter-Spring 500 ml. 8,100 Field Spray™ <i>NEW</i></p>	<p>Ultra Basic Winter-Spring 8,100 Vitality Field Spray™ Wholistic™ Ultra Field Sprays are presequenced combination sprays that allow the farmer or gardener to make one pass when applying these field sprays instead of several or more applications . For healthier honeybees and other pollinators, better flavors, balance, growth, yield, quality, disease and pest resistance and general plant health, apply this Pre-Sequenced Winter-Spring Ultra Basic Field Spray™ at a rate of about 17 ounces (500 ml) per acre. One gallon treats about 7.5 acres. Apply once after December 22, then again between March 20 and before June 21. For best results, spray every 3 months. Contents may be applied at full strength with Big Blaster hand sprayer, one spray every 15', or mixed with water in a pressure sprayer. Spray directly on the field and crop. Mix ONLY with clean, unpolluted, pesticide free, nonchlorinated or dechlorinated water in a clean spray tank. This product is safe around humans, animals, plants and the environment. The 8,100 General Vitality reading is the highest Life Force reading ever recorded on a Kelly Radionics Meter.</p> <p>This pre-sequenced blend is 100 ml each of Premix™, Ground Spray “A”, Leaf Spray “B”, Booster Formula™ and Super Strength Fungus Interruptus™. This custom mix provides protection from insect pests and fungal, bacterial and viral diseases from December 21 to March through June 21. Wholistic™ Pre-Sequenced Ultra Basic Field Sprays are synchronized with the lengthening of daylight hours, or the shortening of daylight hours. After the Summer Solstice on June 21 and through to December 21, apply only the Summer - Fall Ultra Basic Field Sprays™.</p> <p>CONTAINS: 1 Gal.
